Skills:

Javascript
Typescript
CSS
SCSS
HTML
Nuxt
Vue
Svelte
Angular
Jquery
Tailwind
Graphic design

Education:

The School of the Art Institute in Chicago (Graphic Design)

Summary:

Self taught programmer — trained designer.

Art school taught me how to take criticism & build off feedback. Entrepreneurship taught to be self-reliant at solving problems and implementing solutions.

There have been few (if any) problems I have not been able to find/build solutions for — while staying on-budget.

Forever addicted to learning — especially new/better ways of doing things.

My most valuable skill (throughout 10+ years in web development) has been proficient google searching.

Work Experience:

Frontend Consultant

Get it Got (2018-2022)

Worked intimately with small/mid-sized companies to create web-based solutions that increased bottom line.

Our most consistent client saw 10x lift in online revenue per month, and maintains a conversion rate that is more than 3x better than industry average (avg: 1.4% client: 4.5%).

What I did:

- Frontend web development for ecommerce & marketing sites

- Developed apps (used internally) to better connect various 3rd-party APIs & improve productivity

- UI/UX design

- Collaboration with clients and their teams to develop solutions for improving & automating web-based marketing
